1. Persona Overview

These 8 personas represent the core user groups NovaMart must serve. Each was derived from competitor analysis findings (Day 1) and maps directly to NovaMart’s 6 core features. Design decisions in Weeks 2–3 should be validated against at least 2 of these personas.

Table 1: Persona Quick Reference

Persona	Type	Primary Goal	Biggest Pain Point	NovaMart Feature
Priya Sharma	Customer	Fast, visual discovery	Sponsored result overload	F02 Smart Search
Arjun Mehta	Customer	Spec comparison + trust	Counterfeit & fake discounts	F02 + Review system
Sunita Kapoor	Customer	Simple navigation, reorder	Confusing UI, delivery delays	F03 Checkout + IA
Rohit Desai	Customer	Design quality + dark mode	Inconsistent design + no stories	Design system + F05
Vinod Nair	Customer	Clarity, security, accessibility	Hidden costs + dark patterns	F03 Checkout UX
Kavya Reddy	Vendor	Brand identity + simple listing	No brand page on Meesho	F01 Onboarding + F05
Sameer Joshi	Vendor	Analytics + inventory alerts	Insufficient platform data	F05 Vendor Dashboard
Meena Iyer	Vendor	Artisan storytelling + custom	No craft category exists	F01 + F05 Storefront

2. Customer Personas (1–5)

Priya Sharma — Marketing Manager, 28

Priya Sharma *Marketing Manager • 28 years • Bandra, Mumbai*

"I want to find what I love quickly, without 40 sponsored results getting in the way."

Income	Rs.85,000/month	Education	MBA, Mumbai University
Device	iPhone 14, MacBook	Tech comfort	Very high
Shops on	Flipkart, Nykaa, Myntra	Shops for	Fashion, beauty, home decor

Priya lives alone in a 1BHK in Bandra and shops online 3–4 times a month. She values curated experiences over infinite choice. She discovers products primarily through Instagram and then switches to a marketplace to purchase. She abandons carts when checkout asks for too many steps or when she can't find the vendor's return policy quickly.

Goals

- **Fast discovery:** Find a specific product within 2–3 taps, not after scrolling through irrelevant sponsored results.
- **Vendor trust:** Know exactly who she is buying from — name, rating, response time — before adding to cart.
- **Effortless checkout:** Complete a purchase in under 60 seconds using saved address and UPI.
- **Visual browsing:** Browse by aesthetic/style, not just category. Wants a ‘minimalist home decor’ filter, not just ‘home decor’.

Frustrations & Pain Points

- **Sponsored overload:** Top 5 search results on Flipkart and Amazon are always ads, making organic discovery exhausting.
- **Return policy anxiety:** Can never find return/exchange policies without digging 3 levels deep into a product page.
- **Size inconsistency:** Indian sizing varies wildly across brands. No unified size guide causes frequent returns.

- **Checkout regression:** Saved addresses disappear across sessions, forcing re-entry. Extremely frustrating on mobile.
- **Image quality:** Many product photos are low-resolution or show an incorrect colour vs the actual item received.

Shopping Behaviours

- Browses Instagram Reels for product discovery, then searches the exact product name on a marketplace.
- Always reads 3–5 reviews with photos before purchasing any item above Rs. 500.
- Uses the wishlist feature heavily — saves 15–20 items, comes back within a week to buy 2–3.
- Prefers UPI (PhonePe/GPay) over card — abandons if UPI is not the default payment option.
- Checks delivery date before adding to cart — will switch vendor for 1-day faster delivery.

Tech & App Comfort

Skill	Rating	Score
Smartphone usage	■■■■■ 5/5	Excellent
App navigation	■■■■■ 5/5	Excellent
Online payments	■■■■■ 5/5	Excellent
Product research	■■■■■ 4/5	Good
Tech troubleshoot	■■■■■ 3/5	Moderate

What NovaMart Must Deliver

- **Visual filters:** Style-based and colour-based filter chips on the search results page.
- **Sticky return policy:** Display the vendor's return policy as a single line on the product card.
- **Smart size guide:** Interactive size recommender based on measurements, not a static image.
- **Persistent cart:** Cart and wishlist must sync across devices and sessions without requiring login each time.

“If I can't find my size, see who made it, and pay in one tap — I'm already on Myntra.”

Arjun Mehta — Engineering Student, 22

Arjun Mehta

Engineering Student • 22 years • Powai, Mumbai

“I compare 6 listings before buying. I need specs, real photos, and honest reviews.”

Income	Rs. 12,000/month (pocket money)	Education	B.Tech, IIT Bombay
Device	OnePlus Nord, college laptop	Tech comfort	High
Shops on	Amazon, Flipkart, Croma online	Shops for	Electronics, gadgets, books

Arjun is a price-conscious tech enthusiast who spends 45–60 minutes researching before any electronics purchase. He reads full spec sheets, watches YouTube reviews, and checks 3 different platforms for price comparison. He’s been burned twice by counterfeit products and now considers seller rating and return policy his top purchase criteria.

Goals

- **Spec comparison:** Compare 2–3 products side-by-side without opening separate tabs for each.
- **Counterfeit protection:** Clear verified seller badge with number of successful transactions and return rate.
- **Price tracking:** Price history graph on product pages to identify genuine deals vs inflated ‘discounts’.
- **Student deals:** Student-specific discounts or a price drop alert feature for wishlist items.

Frustrations & Pain Points

- **Fake discounts:** Products listed at 60% off a clearly inflated MRP — he can spot it but it erodes trust in the platform.
- **Incomplete specs:** Electronics listings often missing key specs like RAM type, battery watt-hours, or display refresh rate.
- **Review manipulation:** Sees suspiciously clustered 5-star reviews with identical phrasing — no way to filter verified purchase only.
- **No comparison tool:** Has to manually open 3 tabs and switch between them. A built-in compare feature is completely absent on most platforms.
- **COD not available:** High-value electronics often don’t offer COD, forcing card payment despite concerns about counterfeit risk.

Shopping Behaviours

- Searches product name + ‘review’ on YouTube before finalising purchase.
- Sorts by ‘Most helpful review’ and reads 1-star reviews first to find red flags.
- Shares cart links with friends over WhatsApp to get a second opinion before buying.
- Uses student bank accounts — prefers platforms with ICICI/Kotak student card offers.
- Returns products within 24 hours if specs don’t match listing — high return frequency.

Tech & App Comfort

Skill	Rating	Score
Smartphone usage	■■■■■ 5/5	Excellent
App navigation	■■■■■ 4/5	Good
Online payments	■■■■■ 4/5	Good
Product research	■■■■■ 5/5	Excellent
Tech troubleshoot	■■■■■ 5/5	Excellent

What NovaMart Must Deliver

- **Product comparison:** Side-by-side spec comparison for up to 3 products with highlighted differences.
- **Price history:** 30-day price graph on every electronics listing so genuine deals are transparent.
- **Review quality:** Filter reviews by verified purchase, with photo/video-only option.
- **Seller scorecard:** Visible counterfeit report count and response-to-dispute rate per seller.

“I’ll spend an hour researching a Rs. 3,000 purchase. If your platform can’t keep up with that, I’ll use Amazon.”

Sunita Kapoor — Homemaker & Part-time Tutor, 38

Sunita Kapoor *Homemaker & Part-time Tutor • 38 years • Andheri West, Mumbai*

“I just want to find good quality stuff for my home without getting confused.”

Income	Rs. 40,000/month (household)	Education	B.Com, Delhi University
Device	Redmi Note 12, shared family tablet	Tech comfort	Moderate
Shops on	Meesho, Amazon, Big-Basket	Shops for	Home essentials, kitchen, kids' items

Sunita manages a household of four and shops online primarily for convenience. She discovered online shopping during COVID and now uses it for home essentials, kitchenware, and children's clothes. She is price-sensitive and relies heavily on her WhatsApp family group for product recommendations. She gets frustrated when apps are 'too complicated' and prefers clear Hindi/English labels over jargon.

Goals

- **Simple navigation:** Find a product category in 2 taps without needing a search term. Large category icons work best.
- **Trusted quality:** Wants a 'Top Rated' or 'Most Purchased' badge she can trust without reading reviews.
- **Affordable options:** Needs a clear low-to-high price filter and budget category (under Rs. 500) as a permanent homepage section.
- **Easy reorder:** Reorder previous purchases in one tap — she buys the same kitchen items repeatedly.

Frustrations & Pain Points

- **Confusing UI:** Too many options and sub-menus cause her to give up and call her daughter for help.
- **Delivery uncertainty:** Delivery date estimates on Meesho are often wrong by 3–4 days, causing planning problems.
- **Return complexity:** Initiated a return on Amazon and couldn't complete it without her husband's help — 6-step process was too complex.
- **Language gap:** Product descriptions are often in English only — she prefers mixed Hindi-English (Hinglish) descriptions.

- **Fake reviews:** Bought a mop set with 4.5 stars that broke in a week — deeply distrustful of star ratings now.

Shopping Behaviours

- Asks family members or WhatsApp groups for product recommendations before searching.
- Prefers COD (Cash on Delivery) — does not trust online payment for orders above Rs. 800.
- Calls customer support instead of using chat — prefers voice interaction for issue resolution.
- Browses only during morning (9–11am) and evening (8–10pm) when kids are at school or asleep.
- Rarely uses the search bar — navigates entirely through categories and homepage sections.

Tech & App Comfort

Skill	Rating	Score
Smartphone usage	■ ■ ■ ■ ■ 3/5	Moderate
App navigation	■ ■ ■ ■ ■ 2/5	Low
Online payments	■ ■ ■ ■ ■ 2/5	Low
Product research	■ ■ ■ ■ ■ 3/5	Moderate
Tech troubleshoot	■ ■ ■ ■ ■ 1/5	Very low

What NovaMart Must Deliver

- **Simple homepage:** Large category icons with Hindi labels. No more than 5 sections on the homepage.
- **Reorder section:** A dedicated ‘Buy Again’ section on the homepage showing her last 6 purchases.
- **1-step return:** Instant return initiation from the order page with courier pickup — no form filling.
- **Hinglish support:** Product names and key descriptions available in Hinglish for non-English-primary users.

*“Agar app seedha nahi hai, toh main Meesho pe chali jaaungi. Wahan simple hai.”
(If the app isn’t straightforward, I’ll go back to Meesho. It’s simple there.)*

Rohit Desai — Freelance UX Designer, 31

Rohit Desai *UX Designer (Freelance) • 31 years • Koramangala, Bengaluru*

“Good design earns my purchase. Bad design earns a screenshot for my portfolio of fails.”

Income	Rs. 1.2L/month	Education	NID Ahmedabad graduate
Device	Samsung Galaxy S23, iPad Pro	Tech comfort	Expert
Shops on	Etsy, Amazon, Croma, local boutiques	Shops for	Design tools, lifestyle, unique home items

Rohit is a design professional who shops for premium and unique products. He is hyper-aware of UX patterns, notices micro-interactions, and actively evaluates platforms as a professional. He shops on Etsy for unique items and Amazon for reliability but finds both frustrating in different ways. He would become a loyal NovaMart advocate if the design is genuinely thoughtful — and a vocal critic if it isn't.

Goals

- **Design quality:** Expects consistent spacing, accessible contrast, and smooth transitions — treats the UI as a product quality signal.
- **Vendor discovery:** Wants to browse by vendor/maker, not just product category. Cares about the story behind the item.
- **Unique products:** Looking for items not available on mass marketplaces — wants artisan and indie brand sections.
- **Dark mode:** Uses dark mode across all apps. A missing dark mode is a dealbreaker for daily use.

Frustrations & Pain Points

- **Design inconsistency:** Notices misaligned elements, inconsistent button styles, and clashing font sizes across screens immediately.
- **No vendor stories:** Etsy has vendor bios — Amazon and Flipkart hide the seller entirely. Rohit wants to know who made what he buys.
- **Broken accessibility:** Flipkart's colour contrast on sale tags fails WCAG — offends him both aesthetically and professionally.
- **Slow animations:** Laggy transitions on Meesho's Android app make the whole product feel cheap.

- **No design community:** No platform caters to designers looking for curated design-forward or artisan product collections.

Shopping Behaviours

- Screenshots bad UX in apps he uses — maintains a personal ‘UX fails’ Notion page.
- Leaves detailed, specific reviews that mention product quality and packaging experience.
- Follows independent Indian design brands on Instagram and searches for their products on marketplaces.
- Uses desktop browser for big purchases, mobile app for browsing and discovery.
- Refers 3–5 products per month to design community peers — high word-of-mouth value.

Tech & App Comfort

Skill	Rating	Score
Smartphone usage	■■■■■ 5/5	Excellent
App navigation	■■■■■ 5/5	Excellent
Online payments	■■■■■ 5/5	Excellent
Product research	■■■■■ 5/5	Excellent
Tech troubleshoot	■■■■■ 5/5	Excellent

What NovaMart Must Deliver

- **60fps animations:** All transitions and micro-interactions must run at 60fps — no janky transitions.
- **Vendor storefronts:** Each vendor gets a branded page with their story, logo, and product collection.
- **Dark mode:** Full dark mode across all screens with proper dimmed image treatment.
- **WCAG compliance:** All text contrast ratios must meet AA standard — especially sale and status labels.

“I judge a platform’s product quality by how well their add-to-cart animation is designed.”

Vinod Nair — Retired Bank Manager, 54

Vinod Nair *Retired Bank Manager • 54 years • Juhu, Mumbai*

“I’m not bad with technology. I just need things to be clear and honest.”

Income	Rs. 55,000/month (pension + investments)	Education	B.Sc, Calicut University
Device	Samsung A53, desktop PC	Tech comfort	Low-moderate
Shops on	Amazon (son set it up), BigBasket	Shops for	Books, health products, gifts

Vinod started shopping online two years ago when his son helped him set up Amazon. He now shops independently but is cautious — he reads every screen carefully, worries about payment security, and calls his son when something looks unfamiliar. He is a loyal customer once trust is established and represents a large, underserved segment of senior urban shoppers entering e-commerce for the first time.

Goals

- **Safety & clarity:** Wants to see a visible trust/security indicator at checkout — a lock icon and ‘Secure payment’ label matter to him.
- **Readable text:** Needs larger font options — currently zooms in on most apps using accessibility settings.
- **No surprises:** Total price (including delivery, taxes) should be visible before the final payment step.
- **Support access:** Wants a visible phone/WhatsApp support number, not just a chatbot.

Frustrations & Pain Points

- **Small text:** Default font sizes on Flipkart and Meesho are too small — he misreads prices or product variants.
- **Hidden costs:** Added Rs. 499 delivery fee appearing only at the payment step caused him to abandon purchase twice.
- **Dark patterns:** Pre-ticked insurance add-ons and auto-subscriptions make him deeply distrust the platform.
- **Complex navigation:** Gets lost in sub-menus and cannot find the ‘My Orders’ section without help.
- **Chatbot-only support:** Cannot get a real answer from chatbots — gives up and

calls his son instead.

Shopping Behaviours

- Reads every text on the payment screen carefully before tapping ‘Pay’.
- Prefers net banking over UPI — familiar with it from his banking career.
- Bookmarks product pages on his desktop browser instead of using wishlist features.
- Shops only between 10am–1pm — deliberate, unhurried, never impulse purchases.
- Calls customer care before purchasing high-value items to confirm authenticity.

Tech & App Comfort

Skill	Rating	Score
Smartphone usage	■ ■ ■ ■ ■ 2/5	Low
App navigation	■ ■ ■ ■ ■ 2/5	Low
Online payments	■ ■ ■ ■ ■ 3/5	Moderate
Product research	■ ■ ■ ■ ■ 2/5	Low
Tech troubleshoot	■ ■ ■ ■ ■ 1/5	Very low

What NovaMart Must Deliver

- **Accessible typography:** Minimum 16px body text and a font size toggle accessible from any screen.
- **Transparent pricing:** Show final price breakdown (item + delivery + GST) from the cart page, not just at checkout.
- **No dark patterns:** Zero pre-ticked add-ons. Any subscription or add-on must require an explicit opt-in.
- **Human support:** A visible WhatsApp support number on the help page with response under 30 minutes.

“I’ve worked in banking for 30 years. I can spot when someone is trying to trick me.”

3. Vendor Personas (1–3)

Kavya Reddy — Home-based Fashion Reseller, 26

Kavya Reddy *Home-based Fashion Reseller • 26 years • Malad, Mumbai*

“I run my shop from my phone between 9pm and midnight. It has to be that simple.”

Income	Rs. 25,000– 40,000/month (vari- able)	Education	B.Com, Mumbai
Device	Redmi Note 11, shared laptop	Tech comfort	Moderate
Sells on	Meesho, Instagram	Sources from	Surat wholesale market

Kavya started reselling ethnic wear from Surat on Meesho two years ago while managing household duties. She now has 280 Instagram followers and wants to build her own brand identity, which Meesho’s platform doesn’t allow. She sources products in bulk, takes her own photos, and fulfills 8–15 orders per week. She needs onboarding to be fast and the dashboard to work on a mid-range phone.

Goals

- **Brand identity:** Wants her shop to have her logo, brand name, and a custom page — not look like every other Meesho seller.
- **Simple listing:** Upload 5 products in under 10 minutes from her phone — no desktop required.
- **Order management:** See all pending, dispatched, and delivered orders in one clean view.
- **Payment clarity:** Know exactly when her payment will arrive and what commission was deducted — no ambiguity.

Frustrations & Pain Points

- **No brand page:** Meesho gives her zero brand presence — customers buy the product but don’t remember her shop name.
- **Complex bulk listing:** Listing 10+ products requires repetitive form filling — no way to duplicate a listing with slight variations.

- **Payment delays:** Meesho's payment cycle is 7–15 days post-delivery — creates cash flow problems for buying new stock.
- **No customer data:** Cannot see who her repeat customers are or message them after a purchase.
- **Photo requirements:** Platform rejects photos with text overlays or watermarks — her Instagram-style edits get flagged.

Selling Behaviours

- Manages her shop entirely on mobile — never uses a desktop for vendor operations.
- Reposts her Meesho listings on Instagram stories for additional traffic.
- Manually tracks orders in a WhatsApp group message thread as a backup system.
- Sources new stock every 2–3 weeks based on Instagram fashion trends she follows.
- Responds to customer queries within 1 hour — her fast response is her biggest competitive advantage.

Tech & App Comfort

Skill	Rating	Score
Mobile proficiency	■■■■■ 4/5	Good
Inventory mgmt	■■■■■ 2/5	Low
Analytics reading	■■■■■ 2/5	Low
Photography skill	■■■■■ 4/5	Good
Customer service	■■■■■ 5/5	Excellent

What NovaMart Must Deliver

- **Branded storefront:** A customisable vendor page with cover image, logo, tagline, and Instagram link.
- **Duplicate listing:** One-tap 'Copy listing' for adding size/colour variants without refilling every field.
- **Faster payments:** Payment within 3 business days of delivery confirmation — clearly communicated in the dashboard.
- **Customer inbox:** Post-purchase message thread between vendor and customer for delivery queries.

*“Main chahti hoon log mere brand ko yaad rakhe, sirf product ko nahi.”
(I want people to remember my brand, not just the product.)*

Sameer Joshi — Electronics Retailer (SMB), 34

Sameer Joshi *Electronics Retailer (SMB) • 34 years • Andheri East, Mumbai*

“I need data. Gut feeling is how I lost Rs. 2 lakhs in dead stock last year.”

Income	Rs. 1.8L–3L/month (revenue)	Education	B.E. Electronics, VJTI
Device	iPhone 13, Windows desktop	Tech comfort	High
Sells on	Amazon, Flipkart, own website	Sources from	Distributor networks, imports

Sameer runs a 3-person electronics accessories business from a small office in Andheri. He sells mobile cases, chargers, and audio products. He’s experienced with Amazon Seller Central but finds its interface overwhelming and its analytics insufficient for planning inventory. He wants a dashboard that tells him what’s about to go out of stock, which products are underperforming, and where his customers are coming from.

Goals

- **Inventory intelligence:** Automated low-stock alerts with reorder suggestions based on average sales velocity.
- **Sales analytics:** Daily, weekly, and monthly revenue charts with category and product-level breakdown.
- **Competitive pricing:** A tool that monitors category price trends so he can adjust pricing without losing the buy box.
- **Bulk operations:** Upload 50+ products via CSV and edit prices in bulk — one-by-one editing is unacceptable at his scale.

Frustrations & Pain Points

- **Amazon complexity:** Seller Central has 40+ menu items. Finding the disbursement report requires 4 clicks through confusing labels.
- **No traffic data:** Cannot see where his product traffic comes from — organic search, ads, or external links.
- **Return fraud:** Receives returned products that are clearly used or swapped — platform dispute process takes 2+ weeks.
- **Ad ROI opacity:** Spends Rs. 15,000/month on sponsored listings with no clear attribution to actual sales.

- **Account health:** Account health score dropped once due to a carrier delay outside his control — no accessible appeals process.

Selling Behaviours

- Checks his sales dashboard every morning at 8am before opening his office.
- Uses Amazon's FBA for fast-moving products but fulfills slow movers himself.
- Maintains a separate Excel sheet for inventory because platform analytics are insufficient.
- Tests new product listings with small stock batches (10 units) to gauge demand before bulk ordering.
- Runs promotions aligned with Flipkart sale events even on competing platforms.

Tech & App Comfort

Skill	Rating	Score
Mobile proficiency	■■■■■ 4/5	Good
Inventory mgmt	■■■■■ 4/5	Good
Analytics reading	■■■■■ 5/5	Excellent
Photography skill	■■■■■ 3/5	Moderate
Customer service	■■■■■ 3/5	Moderate

What NovaMart Must Deliver

- **Analytics dashboard:** Revenue by product, conversion rate per listing, and traffic source breakdown — all on one screen.
- **Inventory alerts:** Smart reorder alerts: 'You have 8 units left. At current velocity, stock runs out in 6 days.'
- **Bulk CSV upload:** Import/export product catalog via CSV with column mapping for his existing spreadsheet format.
- **Dispute timeline:** Return dispute resolution within 5 business days with transparent status updates.

"I don't mind paying commission if the platform gives me data that helps me sell smarter."

Meena Iyer — Artisan Home Decor Seller, 44

Meena Iyer *Artisan Home Decor Seller • 44 years • Bandra, Mumbai*

“My products have a story. I need a platform that helps me tell it.”

Income	Rs. 35,000– 55,000/month	Education	Diploma in Fine Arts
Device	iPhone SE, old Mac- Book	Tech comfort	Moderate
Sells on	Etsy (international), Instagram DMs	Makes	Tanjore art pieces & decor

Meena creates handmade Tanjore art pieces and home decor items from her studio in Bandra. Originally from Thanjavur, Tamil Nadu, she sells primarily on Etsy for international buyers but wants to reach Indian urban customers who she believes will pay a premium for authentic regional craftsmanship. She is frustrated by Etsy’s weak Indian payment support and high conversion fees, and wants a local platform that values artisan storytelling.

Goals

- **Storytelling tools:** Ability to add a ‘Maker’s story’ section to each listing describing the craft tradition and creation process.
- **Premium positioning:** Her items start at Rs. 2,500. She needs an ‘Artisan / Hand-made’ category that attracts buyers expecting premium prices.
- **Custom order flow:** Accept custom order requests — size, colour, personalisation — directly through the platform.
- **Indian payments:** Receive payments in INR without the conversion fees and delays she faces on Etsy.

Frustrations & Pain Points

- **No craft category:** Meesho and Flipkart lump handmade items under generic ‘Home Decor’ — her work is invisible next to mass-produced items.
- **Price comparison:** Customers compare her Rs. 3,000 hand-painted piece to a Rs. 299 printed frame — no quality signal to differentiate them.
- **Photography burden:** Platform’s white-background-only photo rule destroys the aesthetic context of her craft pieces.
- **Discovery algorithm:** Etsy’s search heavily favours high-volume sellers — her low volume means low visibility despite high ratings.

- **Custom order chaos:** Manages custom order requests via Instagram DMs and WhatsApp — chaotic and unprofessional.

Selling Behaviours

- Photographs products in natural light against handmade backdrops — her photos are her strongest asset.
- Writes detailed listing descriptions (300–500 words) including history of the craft tradition.
- Fulfills only 15–20 orders per month but invests 2–3 hours per order for quality packaging.
- Offers a ‘how it’s made’ video with every order — customers frequently share it on Instagram.
- Prices based on craft hours + material cost — refuses to discount below her floor price.

Tech & App Comfort

Skill	Rating	Score
Mobile proficiency	■■■□□ 3/5	Moderate
Inventory mgmt	■■■□□ 3/5	Moderate
Analytics reading	■■□□□ 2/5	Low
Photography skill	■■■■■ 5/5	Excellent
Customer service	■■■■■ 5/5	Excellent

What NovaMart Must Deliver

- **Artisan storefront:** Rich shop page with craft origin story, maker bio, photo gallery, and press mentions.
- **Custom order module:** Structured custom request form (dimensions, colour preferences, occasion) with price quote workflow.
- **Aesthetic listing:** Allow lifestyle photography (not just white background) for handmade/artisan category listings.
- **Curated discovery:** An ‘Artisan Picks’ or ‘Made in India’ curated section on the homepage with editorial positioning.

“My work is not a product. It is a tradition. The platform must understand the difference.”

4. Design Validation Notes

How to use these personas: Every screen designed in Weeks 2–3 should be validated against at least 2 personas. Ask: “Would Sunita understand this screen in under 5 seconds?” and “Would Rohit screenshot this as a UX fail?”

Table 2: Persona–Feature Validation Matrix

Persona	F01 On-board	F02 Search	F03 Check-out	F04 Tracking	F05 Dash-board	F06 Admin
